DIAGRAM 1: THE DLS FRAMEWORK	5
------------------------------------	---

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

PART 1: INTRODUCTION

BACKGROUND

- 1.1 Pursuant to Malaysia Deposit Insurance Corporation (Differential Premium Systems in respect of Insurer Members) Regulations 2012 (“Regulations”),¹ Perbadanan Insurans Deposit Malaysia (“PIDM”) implemented the Differential Levy Systems (“DLS”) framework for insurance companies. The DLS framework was implemented in line with PIDM’s mandate to administer the takaful and insurance benefits protection system.
- 1.2 The objectives of implementing the DLS framework are as follows:
- (a) to differentiate insurance companies according to their risk profiles;
 - (b) to introduce fairness into the levy system process where insurance companies assessed to be of higher risk will pay higher levies as opposed to insurance companies assessed to be of lower risk;
 - (c) to provide incentives for insurance companies to adopt sound risk management practices; and
 - (d) to promote stability of the financial system via the overall improvement in risk management practices of insurance companies.
- 1.3 In exercise of the power conferred by paragraph 209(1)(b) of the PIDM Act, PIDM issued the Guidelines on the Differential Levy Systems Framework for Insurance Companies (“Guidelines”). These Guidelines set out the assessment approach under the DLS framework, including the formula, threshold and score range for each of the indicators under the quantitative criteria and qualitative criteria. The requirements for reporting and submission of quantitative information by insurance companies to PIDM are also elaborated in the Guidelines.

¹ The Regulations were amended in 2016 pursuant to the Malaysia Deposit Insurance Corporation (Differential Premium Systems in respect of Insurer Members)(Amendment) Regulations 2016, and in 2019 pursuant to Malaysia Deposit Insurance Corporation (Differential Premium Systems in respect of Insurer Members) (Amendment) Regulations 2019.

Perbadanan Insurans Deposit Malaysia
Protecting Your Insurance And Deposits In Malaysia

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

1.4 PIDM continuously reviews the DLS framework to reflect changes in the regulatory developments and operating environment. PIDM also enhances the DLS framework to address feedback and comments during its implementation.

1.5 The current enhancement to the DLS framework are as follows:

Insurance Business Type	Enhancement
Life Insurance	Introduce new indicator – Asset Matching and Return.
General Insurance	Refinement to existing indicator – Mean-Adjusted Return Volatility excludes changes in gross Available-For-Sale (“AFS”) reserve and provides clarification on “other income/outgo” component.

1.6 In view of the enhancements, the Guidelines are updated accordingly.

1.7 These Guidelines are effective beginning assessment year 2020 and shall supersede the Guidelines on the Differential Levy System Framework for Insurance Companies issued on 31 January 2020.

1.8 For purposes of these Guidelines, “Guidelines for Insurance Companies Statistical Submission” or “Guidelines for ICSS” means the Guidance Notes for Insurance Companies Statistical System on Submission of Monthly/Quarterly/Annual Statistical Returns as may be issued by Bank Negara Malaysia (“BNM”).

1.9 Unless expressly stated otherwise, any information or document required to be submitted to PIDM under these Guidelines, including any letter, report, form, returns and action plan, shall be submitted online through PIDM’s portal. The original hardcopy shall be kept by the insurer member.

1.10 A reference to a statute or other law includes regulations and other instruments under it and consolidations, amendments, re-enactments or replacements of any of them.

1.11 PIDM may specify such other periods or dates for compliance with any of the provisions in these Guidelines, or for any act to be done, in such form and subject to such terms and conditions as PIDM thinks fit.

PART 2: SCOPE OF APPLICATION

- 2.1 The DLS Framework is applicable to all insurance companies that are licensed to carry on insurance business under Section 10 of the Financial Services Act 2013, except for insurers licensed to carry on solely reinsurance business and Danajamin Nasional Berhad. Table 1 depicts the application of the DLS framework in respect of an insurance company’s business.

Table 1: Scope of Application

Insurance Business Type	General Insurance DLS Criteria	Life Insurance DLS Criteria
General Insurance	✓	
Life Insurance		✓

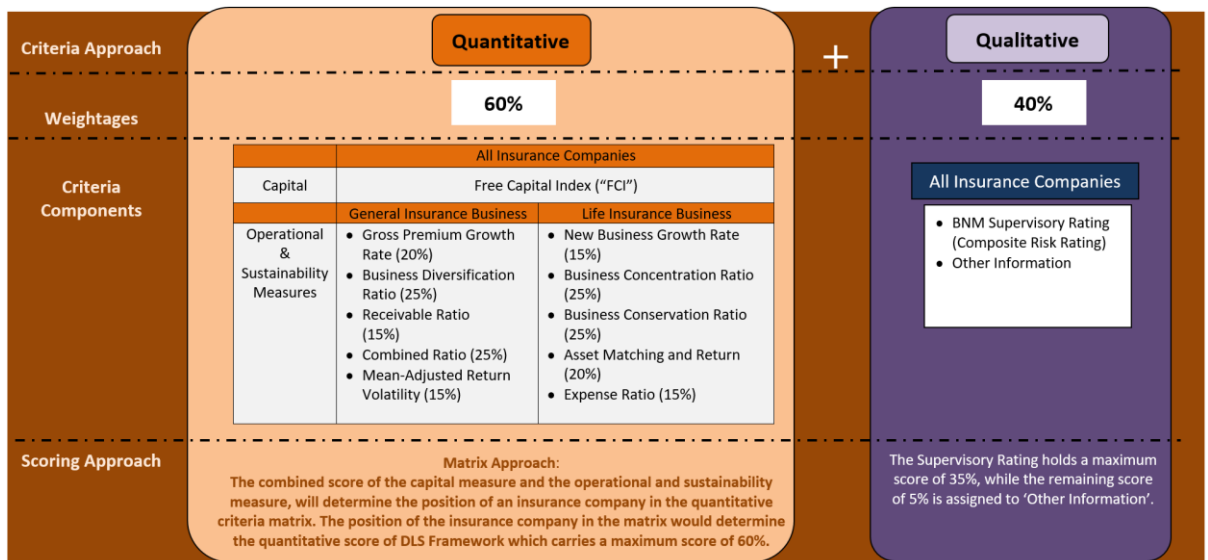

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

PART 3: DIFFERENTIAL LEVY SYSTEMS FRAMEWORK

OVERVIEW

- 3.1 An insurance company shall be assessed and classified into different categories in an assessment year based on a combined quantitative and qualitative criteria approach.
- 3.2 In order to achieve higher objectivity and transparency, a heavier weightage is assigned to the quantitative criteria which carries a score of 60%, while the qualitative criteria carries the remaining score of 40% out of a total score of 100%.
- 3.3 The DLS Framework is summarised in Diagram 1.

Diagram 1: The DLS Framework

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

QUANTITATIVE CRITERIA

- 3.4 The assessment of the quantitative criteria is based on a ‘matrix approach’, which enables the risk profile of the insurance companies to be better differentiated based on two (2) independent components of assessment.
- 3.5 The horizontal axis of the matrix approach measures the capital strength, i.e. Free Capital Index. Capital strength is important as it provides a cushion against any unexpected adverse events in the insurance companies’ earnings and assets quality.
- 3.6 On the other side, the vertical axis of the matrix approach reflects the operational and sustainability measure, which aims to assess the efficiency of the insurance companies’ operational management and sustainability of the financial performance. This measure is made up of different sets of indicators which are assigned specific weightages. The indicators and their respective weightages for both general and life insurance businesses are set out in Table 2 below.

Table 2: Summary of Operational and Sustainability Measure

General Insurance Business		Life Insurance Business	
Indicators	Weightage	Indicators	Weightage
Gross premium growth rate	20%	New business growth rate	15%
Business diversification ratio	25%	Business concentration ratio	25%
Receivable ratio	15%	Business conservation ratio	25%
Combined ratio	25%	Asset matching and return	20%
Mean-adjusted return volatility	15%	Expense ratio	15%
Total	100%	Total	100%

- 3.7 The combined score of the capital measure and the operational and sustainability measure, will determine the position of an insurance company in the quantitative criteria matrix, as represented by the symbols M1 to M7 as set out in Table 3 in the following page.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Table 3: Quantitative Criteria Matrix

Operational and Sustainability Measure	Capital Measure			
	< 1.00	1.00 ≤ but ≤1.10	1.10< but ≤1.20	>1.20
≥ 85	M6	M4	M2	M1
≥ 65 but < 85	M6	M4	M3	M2
≥ 50 but < 65	M7	M5	M4	M3
< 50	M7	M7	M5	M4

- 3.8 Each of the seven (7) categories within the matrix is then assigned a quantitative score as set out in Table 4 below. The score reflects the overall quantitative performance of the insurance company.

Table 4: Quantitative Criteria Score

Quantitative Criteria Matrix Category	Score (%)
M1	60
M2	55
M3	45
M4	40
M5	30
M6	25
M7	15

QUALITATIVE CRITERIA

- 3.9 The qualitative criteria include both the supervisory rating of insurance companies assigned by BNM, and any other information that will have implication on the safety and soundness of the insurance companies. The 'Supervisory Rating' carries a maximum score of 35%, while the remaining score of 5% is assigned to 'Other Information'.

PART 4: QUANTITATIVE CRITERIA

4.1 Capital Measure

Free Capital Index

Free capital index is a measure of the capital buffer above the individual target capital level (“ITCL”). This index reflects the insurance company’s capital sufficiency and its resilience to adverse situations.

4.2 Operational and Sustainability Measure – *General Insurance Business*

(a) Gross Premium Growth Rate

The gross premium growth rate measures the insurance company’s total business growth. The growth in premiums provides a constant stream of income to support the insurance company’s business operations and enhances its market share.

(b) Business Diversification Ratio

The business diversification ratio measures the extent of the insurance company’s portfolio diversification. A well-diversified portfolio helps the insurance company to avoid being significantly affected by any adverse experience in its line of business.

(c) Receivable Ratio

The receivable ratio measures the extent of insurance receivables against the total premiums income. This ratio indicates the operational efficiency of the insurance company based on its ability to manage its receivables collection i.e. collect its outstanding premiums, agents balances and reinsurance balances.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

(d) **Combined Ratio**

The combined ratio measures the performance and profitability of the insurance company's core business activities. An insurance company needs to ensure that the inflow of insurance premium exceeds the outgo including expenses, as this is an indication of a profitable insurance business.

(e) **Mean-Adjusted Return Volatility**

Mean-adjusted return volatility ("MARV") measures the downside risk of profitability. It gauges the downside volatility of the profits over a 3-year period and hence provides an indication on the profits' sustainability. Volatile earnings trend will render the insurance company's capital position more vulnerable in the event of losses, as capital may be eroded if the earnings are inadequate to absorb the losses.

4.3 **Operational and Sustainability Measure - Life Insurance Business**

(a) **New Business Growth Rate**

The new business growth rate measures the total growth of an insurance company's new business. The consistent growth of new business premiums will ensure a constant stream of income to support the insurance company's business operations and enhances its market share.

(b) **Business Concentration Ratio**

The business concentration ratio measures the proportion of regular premiums policy business to single premiums policy business. An appropriate composition of single and regular premiums products ensures continuous future stream of income.

(c) **Business Conservation Ratio**

The business conservation ratio measures the proportion of policies that remain in-force at the end of a period out of the total policies that were in-force at the beginning of the period. This indicator assesses the business retention ability of the insurance company and reflects the sustainability level of its business.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

(d) **Asset Matching and Return**

Asset matching and return (“AMR”) measures the ability of a life insurer in strategically investing its assets in the life insurance fund to match the exposure from its insurance liabilities, while maintaining an appropriate level of investment returns.

This indicator is based on a matrix approach, comprising two sub-indicators: (a) Asset-Liability Duration Matching (“ALDM”) and (b) Investment Yield (“IY”). The ALDM measures the estimated dollar duration mismatch between interest rate related assets and liabilities, emphasising on the exposure under a stressed interest rate environment. Meanwhile, the IY measures the investment performance in terms of the life insurance company’s investment income in proportion to the investment assets held by the life insurance company.

(e) **Expense Ratio**

The expense ratio measures the expenses incurred to produce every Ringgit of premiums income. It indicates how efficient the insurance company in managing its operating costs to generate premiums income, by benchmarking its management expenses and agency remuneration against the premiums income generated.

4.4 For the detailed requirements of all the above indicators, please refer to the attached **Appendices**. As for the computations of the indicators, please refer to the attached **Illustrations**.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

PART 5: QUALITATIVE CRITERIA

5.1 For the qualitative criteria, each insurance company shall be assessed based on BNM’s supervisory rating and other information i.e. other qualitative factors.

(a) **Supervisory Rating**

The supervisory rating, namely the composite risk rating (“CRR”), as assessed by BNM for the assessment period up to 31 December of the preceding assessment year will be used. The insurance company shall be assigned scores as set out in Table 5 below.

Table 5: Score Range for Supervisory Rating

Supervisory Rating	
Range of Results	Score (%)
Supervisory Rating of LOW or equivalent	35
Supervisory Rating of MODERATE or equivalent	22
Supervisory Rating of ABOVE AVERAGE or equivalent	10
Supervisory Rating of HIGH or equivalent	0

(b) **Other Information**

The score shall be determined by PIDM based on information relating to the insurance company’s safety and soundness, its viability or its financial condition.

This information may include information about the insurance company other than that specified in the supervisory rating of the insurance company, which takes into account the following factors:

- (i) the insurance company’s failure to comply with any subsidiary legislation made by PIDM, including guidelines or with any regulatory requirements that apply to the insurance company;
- (ii) any action taken by any regulatory or other authority against the insurance company or any corporation related to the insurance company including but not limited to any notice, order or instruction

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

relating to any deficiency or non-compliance in respect of the insurance company or such corporation, a letter of warning, or any requirement or instruction for issuance of a letter of undertaking or commitment or a resolution of the board of directors;

- (iii) any correction or action plan of the insurance company or such corporation to address the action taken by such authority under subparagraph (ii) including but not limited to the progress report on the implementation by the insurance company of the terms of the letter of undertaking or commitment or the resolution of the board of directors;
- (iv) any rating or assessment of the insurance company by any rating agency whether relating to the credit standing of the insurance company or its financial condition or otherwise;
- (v) whether the insurance company has received or is receiving any form of assistance from BNM or PIDM, such assistance being financial or otherwise; and
- (vi) any other information provided to PIDM or that comes to the attention of PIDM about the insurance company or any corporation related to the insurance company.

The scores for the other information criteria shall be determined as set out in Table 6 below.

Table 6: Score Range for Other Information

Other Information	
Assessment Criteria	Score (%)
As at 30 April of the assessment year, no information has come to PIDM's attention about any circumstances that represent a threat to or materially affect the financial condition, safety, soundness, or viability of the insurance company.	5
As at 30 April of the assessment year, information has come to PIDM's attention about circumstances that represent a threat to or may materially affect the financial condition, safety, soundness, or viability of the insurance company.	3
As at 30 April of the assessment year, information has come to PIDM's attention about circumstances that materially affect the financial condition, safety, soundness, or viability of the insurance company.	0

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

PART 6: LEVY CATEGORY AND LEVY RATE

LEVY CATEGORY

- 6.1 The summation of the respective scores from the quantitative and qualitative criteria will determine the insurance company's overall DLS score. All insurance companies shall be classified into one (1) of the four (4) levy categories based on their overall DLS score. The table below sets out the overall DLS score range and the respective levy categories:

Table 7: Overall DLS Score Range and Levy Categories

Overall DLS Score	Levy Category
DLS Score \geq 85%	1
65% \leq DLS Score < 85%	2
50% \leq DLS Score < 65%	3
DLS Score < 50%	4

LEVY RATE

- 6.2 Each levy category carries a prescribed levy rate and the minimum levy amount for the purpose of determining the amount of levy payable by an insurance company to PIDM for the assessment year.
- 6.3 An insurance company shall pay its annual levy by **31 May** (or the immediate preceding working day if 31 May falls on a weekend or a public holiday in Kuala Lumpur) of each assessment year based on the DLS score and levy category notified by PIDM.
- 6.4 An insurance company shall complete the return on calculation of levy based on the Guidelines on Takaful and Insurance Benefits Protection System: Submission of Returns on Calculation of Levies for Takaful and Insurance Businesses issued on 30 March 2020.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

PART 7: REPORTING, SUBMISSION AND APPEAL

REPORTING REFERENCE DATE

QUANTITATIVE CRITERIA

- 7.1 The quantitative criteria shall be calculated based on an insurance company's relevant financial statements as at 31 December of each preceding assessment year. In this respect, the financial statements shall be referred to as the following:
- (a) **For an insurance company with 31 December financial year end:** audited financial statements (i.e. Insurance Companies Statistical System ("ICSS"), Risk-Based Capital ("RBC") reporting forms, and other supporting information for the financial period); or
 - (b) **For an insurance company with non-31 December financial year end:** approved financial statements (i.e. ICSS, RBC reporting forms, and other supporting information for the financial period, which have been approved by the Management of the insurance company).

QUALITATIVE CRITERIA

- 7.2 For the supervisory rating criteria, the supervisory rating for each insurance company as at 31 December of the preceding assessment year shall be applied to determine the scores for levy calculation purposes for an assessment year. BNM will provide the supervisory ratings to PIDM.
- 7.3 For the other information criteria, an insurance company shall be assessed based on information received by PIDM on or before 30 April of the assessment year.

INSUFFICIENT QUANTITATIVE INFORMATION

- 7.4 For an insurance company with insufficient information for the purposes of calculating the scores of certain indicators for operational and sustainability measure, the scores for such indicator shall be determined on a proportionate basis as stated below:

$$[A \div (100 - B)] \times B$$

where

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

A is the sum of the scores assigned to an insurance company for each indicator where quantitative information is available.

B is the sum of maximum scores for indicators where quantitative information is not available for computation.

An example of the computation of the overall DLS scores for an insurance company carrying on general insurance business with insufficient quantitative information is provided in Illustration 13.

SUBMISSION DATE

- 7.5 An insurance company must submit the certified quantitative information² to PIDM latest by **30 April** (or the immediate preceding working day if 30 April falls on a weekend or a public holiday in Kuala Lumpur) of each assessment year for the purposes of computing the DLS score of the insurance company.
- 7.6 An insurance company's Chief Executive Officer ("CEO"), and its Chief Financial Officer ("CFO") or Head of Finance or Appointed Actuary, must certify that the quantitative information is accurate and reflective of the financial condition of the insurance company as at 31 December of the preceding assessment year. All reports that require certification /signatories shall be scanned and the scanned copy must be submitted to PIDM online through PIDM's portal.
- 7.7 For an insurance company that fails to comply with the requirements in paragraphs 7.5 and 7.6, PIDM will assign a score to the insurance company according to any available information, and a levy surcharge may be imposed on such insurance company pursuant to Section 75 of the PIDM Act.

FILING RESUBMISSION

- 7.8 In circumstances where an insurance company submits its amended quantitative information to PIDM after the submission deadline i.e. 30 April of the assessment year, the amended submission shall reach PIDM by **10 May** (or the immediate preceding working day if 10 May falls on a weekend or a public holiday in Kuala Lumpur) of that assessment year.
- 7.9 An insurance company shall be rated based on the latest information received by PIDM **on or before 10 May** of that assessment year.

² Certified quantitative information refers to DLS reporting form in pre-formatted excel spreadsheet and the certification in pdf format.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

- 7.10 An insurance company that submits any amended information shall be expected to comply with the provisions for information integrity as specified under paragraph 7.11 (Information Integrity).

INFORMATION INTEGRITY

- 7.11 An insurance company shall be accountable to ensure the accuracy of the information submitted for DLS. For an insurance company that does not comply with the requirements with regard to information integrity, a levy surcharge may be imposed on such insurance company pursuant to Section 75 of the PIDM Act.
- 7.12 In respect of the accuracy of the DLS quantitative information and the Returns on Calculation of Levies (“RCL”) submitted to PIDM, an insurance company’s internal auditor and external auditor will perform an independent validation under the Guidelines on Validation Programme: Differential Levy Systems and Levies Calculation issued on 30 March 2020³.
- 7.13 Pursuant to Section 193 of the PIDM Act, any person who prepares, signs, approves or concurs in any account, statement, return, report or other document required for submission to PIDM that he or she knows or has reason to believe is false or contains false or misleading information, commits an offence punishable by fine or imprisonment or both.⁴

COMPUTATION AND NOTIFICATION OF SCORE

- 7.14 The overall DLS score shall be the sum of scores assigned for the quantitative and the qualitative criteria.
- 7.15 The score of each criterion is prescribed in the Malaysia Deposit Insurance Corporation (Differential Premium Systems in Respect of Insurer Members) Regulations 2012.⁵
- 7.16 PIDM will compute the overall DLS score for each insurance company and notify the insurance companies of their respective score, levy category and applicable levy rate by **15 May** of each assessment year. This will provide sufficient time for an insurance

³ Which supersedes the “Guidelines on Validation Programme: Differential Levy Systems and Levies Calculation” issued on 31 January 2020.

⁴ Section 193 of the Act, applies to officers of the insurance companies, internal auditors and external auditors with regard to the DLS framework and RCL reporting and the validation programme.

⁵ As amended by the Malaysia Deposit Insurance Corporation (Differential Premium Systems in respect of Insurer Members) (Amendment) Regulations 2016 and Malaysia Deposit Insurance Corporation (Differential Premium Systems in respect of Insurer Members) (Amendment) Regulations 2019.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

company to make the necessary arrangement for the payment of levy that is due to PIDM by **31 May** (or the immediate preceding working day or if 31 May falls on a weekend or a public holiday in Kuala Lumpur) of each assessment year. Please refer to Illustration 12 for an example of DLS scoring and levy categorisation.

APPEAL PROCESS

- 7.17 An appeal process is put in place to provide an avenue for any insurance company to request for a review of its final score, levy category and levy rate in certain circumstances.
- 7.18 An insurance company may appeal against its score, levy category and levy rate **after 31 May** of an assessment year and is required to formally submit its appeal in writing to PIDM within the time specified in paragraph 7.20. The reason(s) or ground(s) for the appeal, as set out in paragraph 7.19 must be included.
- 7.19 The appeal must be on the basis of an error in the quantitative information provided by an insurance company to PIDM or an error in PIDM’s computation of any of the quantitative criteria or an error in PIDM’s assessment of the qualitative criteria, other than the supervisory rating by BNM.
- 7.20 Any request for appeal shall be submitted in writing to PIDM **no later than 31 August** of that assessment year. PIDM will review and respond to the appeal by **30 September** of that assessment year. Notwithstanding the appeal, an insurer member must pay the annual levy to PIDM **on or before 31 May** of that assessment year.
- 7.21 If the appeal results in PIDM determining that an insurance company has overpaid its annual levy for that assessment year, PIDM shall refund the difference to the insurance company after the appeal process is concluded. Conversely, if it is determined that an insurance company has underpaid its annual levy for that assessment year, the insurance company shall pay the difference to PIDM.

PROHIBITION AGAINST PUBLIC DISCLOSURE

- 7.22 An insurance company acknowledges that the following information (“Information”) is confidential:
- (a) An insurance company’s score for any indicator or criteria of the DLS;
 - (b) An insurance company’s total criteria score;
 - (c) Levy category in which an insurance company is or has been classified;
 - (d) Levy rate that is or was applicable to an insurance company; and
 - (e) The amount of levy payable or paid by an insurance company.

TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

PART 8: REPORTING MANUAL AND FORMS

GENERAL REQUIREMENT

- 8.1 Any restatement made to an insurance company's previous year's financial information shall be reflected in the submission of quantitative information to PIDM. However, the insurance company's previous year DLS score will not be amended.
- 8.2 All amounts shall be reported in thousands ('000).
- 8.3 All percentages shall be expressed to two (2) decimal points.
- 8.4 An insurance company must use the pre-formatted excel spreadsheet provided in the PIDM's corporate website for submission to PIDM. An insurance company must also ensure that no alteration or amendment is made to the pre-formatted excel spreadsheet. An insurance company shall only be required to fill-in the marked cells.

Protecting Your Insurance And Deposits In Malaysia

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

PART 9: NEW INSURANCE COMPANY AND AMALGAMATED INSURER MEMBER

NEW INSURANCE COMPANY

- 9.1 An insurance company shall be automatically categorised in the best levy category for the assessment year in which it becomes an insurer member (“first assessment year”), and the assessment year immediately after the first assessment year (“second assessment year”).
- 9.2 An insurance company is not required to submit the quantitative information to PIDM for the first assessment year and second assessment year. The insurance company is required to submit the quantitative information to PIDM from the third assessment year onwards.
- 9.3 In the event that an insurance company does not have sufficient information to calculate certain criteria in the third assessment year, the scores of these criteria shall be assigned proportionately according to paragraph 7.4 (Insufficient Quantitative Information).
- 9.4 For the computation of quantitative criteria for the third assessment year onwards, the quantitative information relating to the position as at 31 December of the first assessment year shall not be included in the computation. The scores of these criteria shall be assigned proportionately according to paragraph 7.4 (Insufficient Quantitative Information).

AMALGAMATED INSURER MEMBER

- 9.5 An amalgamated insurer member means an insurance company formed from the acquisition of one (1) insurance company by another insurance company or the merger of two (2) or more insurance companies at any time from 1 June of the preceding assessment year to 31 May of an assessment year.
- 9.6 The following provisions shall apply in determining the quantitative and qualitative scores of the amalgamated insurer member for a particular assessment year:

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

(a) An amalgamated insurer member is formed on or before 31 December of the preceding assessment year

The computation of each indicator of the amalgamated insurer member for the quantitative criteria shall be based on the financial information of the amalgamated insurer member as at 31 December of the preceding assessment year.

The scoring of the amalgamated insurer member for the qualitative criteria shall be based on the supervisory rating and other relevant information of the amalgamated insurer member as at 31 December of the preceding assessment year.

Example 1:

Insurance Companies A and B were involved in the process of merger and acquisition and transferred whole or part of their insurance business to the amalgamated insurer member known as Insurance Company 'X'. Insurance Company 'X' commences operations on 1 September 2019.

For the assessment year 2020, Insurance Company 'X' shall submit its quantitative information based on the financial information as at 31 December 2019.

(b) An amalgamated insurer member is formed after 31 December of the assessment year

The computation of each indicator of the amalgamated insurer member for the quantitative criteria shall be based on the financial information of the amalgamating insurer member⁶ as at 31 December of the preceding assessment year.

The scoring of the amalgamated insurer member for the qualitative criteria shall be based on the supervisory rating and other relevant information of the amalgamating insurer member as at 31 December of the preceding assessment year.

⁶ An amalgamating insurer member refers to any one of the insurer members involved in an amalgamation or a merger with the highest total scoring for quantitative criteria as of 31 December of the preceding assessment year.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Example 2:

Insurance Companies A and B were involved in the process of merger and acquisition. The process of transferring assets and liabilities is completed, resulting in the formation of an amalgamated insurer member, Insurance Company 'Y', on 2 January 2020. The table below depicts the scores of the quantitative, supervisory and other information of the insurance companies for position as at 31 December 2019:

Criteria	Insurance Companies	
	A	B
Quantitative		
Capital – FCI	1.21	1.15
Operational and sustainability score	75%	55%
Total Quantitative Score (a)	55%	40%
Qualitative		
Supervisory rating	22%	10%
Other information criteria	5%	0%
Total Qualitative Score (b)	27%	10%
Total DLS Score (a) + (b)	82%	50%

Insurance Company A (the amalgamating insurer member) has the highest quantitative score as at 31 December 2019. Insurance Company 'Y' shall submit its quantitative information forms based on the financial information of Insurance Company A for the assessment year 2020. Insurance Company A's supervisory rating score of 22% and the other information score of 5% will be also applied to Insurance Company 'Y' to arrive at the overall DLS score for assessment year 2020.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Appendix 1

CAPITAL MEASURE

Free Capital Index

Formula:

$$\text{Free Capital Index} = \frac{\text{Capital adequacy ratio (\%)}}{\text{Individual target capital level (\%)}}$$

Note:

- (i) Capital adequacy ratio ("CAR") is as determined in the 'Risk-Based Capital ("RBC") Framework for Insurers' specified by BNM.
- (ii) Individual target capital level ("ITCL") is as determined in the 'Guidelines on Internal Capital Adequacy Assessment Process ("ICAAP") for Insurers issued by BNM.
- (iii) The insurance company's ITCL shall be based on the latest ITCL agreed by BNM as at 31 December of the preceding assessment year.
- (iv) In the case of amalgamated insurer member (please refer to paragraph 9.5), if the ITCL of an insurance company has yet to be determined as at 31 December of the preceding assessment year, the insurance company shall be categorised at the minimum required FCI (score range of $1.00 \leq \text{FCI} \leq 1.10$) until the ITCL of the insurance company is determined.

Data Requirement	Source of Information	Remarks
CAR	Form A of the RBC Framework - Reporting Form.	CAR is based on the average CAR of four (4) quarters within the preceding assessment year.
ITCL	As agreed by BNM, specified in Guidelines on ICAAP for Insurers.	-

Score Range:

Free Capital Index
Range of Results
Free Capital Index > 1.20
$1.10 < \text{Free Capital Index} \leq 1.20$
$1.00 \leq \text{Free Capital Index} \leq 1.10$
Free Capital Index < 1.00

TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Appendix 2

OPERATIONAL AND SUSTAINABILITY MEASURE - GENERAL INSURANCE BUSINESS

Gross Premium Growth Rate

Formula:

$$\text{Gross Premium Growth Rate} = \frac{[\text{Gross premiums (t)} - \text{Gross premiums (t-1)}]}{\text{Gross premiums (t-1)}} \times 100\%$$

3-year weighted average

$$\text{Gross Premium Growth Rate} = [50\% \times \text{growth rate (t)}] + [30\% \times \text{growth rate (t-1)}] + [20\% \times \text{growth rate (t-2)}]$$

where,

t = one year immediately preceding the current assessment year;

t-1 = two years immediately preceding the current assessment year; and

t-2 = three years immediately preceding the current assessment year.

Note:

- (i) Gross premium growth rate is based on a 3-year weighted average growth rate, i.e. weightages of 50% for one year immediately preceding the current assessment year, 30% for two years immediately preceding the current assessment year and 20% for three years immediately preceding the current assessment year.
- (ii) An insurance company which has less than four (4) years of data shall not be assigned a score for this indicator. The score of this indicator shall be determined on a proportionate basis as specified in paragraph 7.4 (Insufficient Quantitative Information).

Data Requirement	Source of Information	Remarks
Gross premiums	Statement of Premiums, Form G6 as specified in the Guidelines for ICSS.	Gross premiums include premiums from direct business (less return premiums) and all reinsurances accepted.

Score Range:

Gross Premium Growth Rate	
Range of Results	Score (%)
Gross Premium Growth Rate > 10.00%	20
5.00% < Gross Premium Growth Rate ≤ 10.00%	14
0.00% < Gross Premium Growth Rate ≤ 5.00%	7
Gross Premium Growth Rate ≤ 0.00%	0

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Appendix 3

OPERATIONAL AND SUSTAINABILITY MEASURE - GENERAL INSURANCE BUSINESS

Business Diversification Ratio

Formula:

$$\text{Business Diversification Ratio} = \frac{\text{Provision of risk margin for adverse deviation ("PRAD")} - \text{Fund provision of risk margin for adverse deviation ("FPRAD")}}{\text{Provision of risk margin for adverse deviation ("PRAD")}} \times 100\%$$

Note:

- (i) The PRAD refers to the provision of risk margin for adverse deviation, is the component of the value of the insurance liabilities that relates to the uncertainty inherent in the best estimate, as defined in the RBC Framework.

Data Requirement	Source of Information	Remarks
PRAD	RBC Framework - Reporting Form: General insurance fund - Valuation liabilities, Form D and Form D-1.	The PRAD includes valuation of premium liabilities attributable to all classes of businesses, including those attributable to Malaysian Motor Insurance Pool ("MMIP").
FPRAD	RBC Framework - Reporting Form: General insurance fund - Valuation liabilities, Form D and Form D-1.	The FPRAD includes valuation of premium liabilities attributable to all classes of businesses, including those attributable to MMIP.

Score Range:

Business Diversification Ratio	
Range of Results	Score (%)
Business Diversification Ratio > 30.00%	25
20.00% < Business Diversification Ratio ≤ 30.00%	16
15.00% ≤ Business Diversification Ratio ≤ 20.00%	8
Business Diversification Ratio < 15.00%	0

Appendix 4

OPERATIONAL AND SUSTAINABILITY MEASURE - GENERAL INSURANCE BUSINESS

Receivable Ratio

Formula:

$$\text{Receivable Ratio} = \frac{\text{Insurance receivables}}{\text{Gross premiums}} \times 100\%$$

Data Requirement	Source of Information	Remarks
Gross premiums	Statement of Premiums, Form G6 as specified in the Guidelines for ICSS.	Gross premiums include premiums from direct business (less return premiums) and all reinsurances accepted.
Insurance receivables	Ageing Schedule, Schedule 12, Form G3 as specified in the Guidelines for ICSS.	Insurance receivables refers to the aggregate of total gross outstanding premiums and agents' balances of more than 60 days and total amount due from reinsurers or ceding companies of more than 90 days.

Score Range:

Receivable Ratio	
Range of Results	Score (%)
Receivable Ratio ≤ 10.00%	15
10.00% < Receivable Ratio ≤ 15.00%	10
15.00% < Receivable Ratio ≤ 20.00%	5
Receivable Ratio > 20.00%	0

TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Appendix 5

OPERATIONAL AND SUSTAINABILITY MEASURE - GENERAL INSURANCE BUSINESS

Combined Ratio

Formula:

$$\text{Combined Ratio} = \frac{\text{Net claims incurred} + \text{Management expenses} + \text{Net commission}}{\text{Earned premium income}} \times 100\%$$

Data Requirement	Source of Information	Remarks
Net claims incurred	Statement of Claims, Form G7 as specified in the Guidelines for ICSS.	Net claims incurred refers to the claims paid, increase or decrease in provisions for outstanding claims liabilities within the preceding assessment year and net of reinsurance recoveries.
Management expenses	General Business Revenue Account, Form G1 as specified in the Guidelines for ICSS.	Management expenses refer to all expenses relating to insurance business other than claims and commission.
Net commission	Statement of Commissions, Form G8 as specified in the Guidelines for ICSS.	Net commission refers to the commissions and profit commission and brokerage paid or payable on direct business and on reinsurance accepted business less commissions and profit commissions earned on reinsurance ceded.
Earned premium income	Statement of Premiums, Form G6 as specified in the Guidelines for ICSS.	Earned premium income refers to net premiums less increase or plus decrease in premium liabilities within the preceding assessment year.

Score Range:

Combined Ratio	
Range of Results	Score (%)
Combined Ratio < 90.00%	25
90.00% ≤ Combined Ratio ≤ 95.00%	16
95.00% < Combined Ratio ≤ 100.00%	8
Combined Ratio > 100.00%	0

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Appendix 6

OPERATIONAL AND SUSTAINABILITY MEASURE - GENERAL INSURANCE BUSINESS

Mean-adjusted Return Volatility

Formula:

$$\text{Mean-Adjusted Return Volatility} = \frac{\text{Semi standard deviation of operating profit or loss over three (3) years}}{\text{Mean operating profit or loss over three (3) years}}$$

Note:

- (i) Operating profit or loss refers to the profit or loss arising from business operation, which includes earned premium income, net claims incurred, management expenses, net commission, net investment income, net bad and doubtful debts/bad debts recovery, net capital gains or losses and other income or outgo (excludes any income or expenses arising from recognition of deferred taxation).
- (ii) For the computation of this indicator, operating profit should not include taxation for the year.

Data Requirement	Source of Information	Remarks
Earned premium income	Statement of Premiums, Form G6 as specified in the Guidelines for ICSS.	Earned premium income refers to net premiums less increase or plus decrease in premium liabilities within the preceding assessment year.
Net claims incurred	Statement of Claims, Form G7 as specified in the Guidelines for ICSS.	Net claims incurred refers to the claims paid, increase or decrease in provisions for outstanding claims liabilities within the preceding assessment year and net of reinsurance recoveries.
Management expenses	General Business Revenue Account, Form G1 as specified in the Guidelines for ICSS.	Management expenses refer to all expenses relating to insurance business other than claims and commission.
Net commission	Statement of Commissions, Form G8 as specified in the Guidelines for ICSS.	Net commission refers to the commissions and profit commission and brokerage paid or payable on direct business and on reinsurance accepted business less commissions and profit commissions earned on reinsurance ceded.
Net bad and doubtful debts/ Bad debts recovery	General Business Revenue Account, Form G1 as specified in the Guidelines for ICSS.	-
Net investment income	General Business Revenue Account, Form G1 as specified in the Guidelines for ICSS.	-

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Data Requirement	Source of Information	Remarks
Net capital gains or losses	General Business Revenue Account, Form G1 as specified in the Guidelines for ICSS.	Net capital gains or losses includes: (i) Profit on disposal of securities, properties and other properties, plant and equipment; (ii) Loss on disposal of securities, properties and other properties, plant and equipment; (iii) Accretion of discount on securities; (iv) Amortisation of premiums on securities; (v) Unrealised gain on securities and other investment (vi) Unrealised loss on securities and other investments; (vii) Write back of impairment loss of securities and other investments; and (viii) Impairment loss of securities and other investments.
Other income/outgo	General Business Revenue Account, Form G1 as specified in the Guidelines for ICSS.	Other income/outgo excludes: (i) any tax income/expense arising from recognition of deferred taxation; and (ii) any income/expense not arising from day-to-day business operations e.g: Day-1 adjustments due to the adoption of new accounting standards.

Score Range:

Mean-Adjusted Return Volatility	
Range of Results	Score (%)
$0 \leq \text{MARV} \leq 0.2$	15
$0.2 < \text{MARV} \leq 0.5$	10
$\text{MARV} > 0.5$	0
MARV is negative or the mean operating profit/(loss) over a period of three years is zero	0

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Appendix 7

OPERATIONAL AND SUSTAINABILITY MEASURE - LIFE INSURANCE BUSINESS

New Business Growth Rate

Formula:

$$\text{New Business Growth Rate} = \frac{[\text{New business premiums (t)} - \text{New business premiums (t-1)}]}{\text{New business premiums (t-1)}} \times 100\%$$

3-year weighted average

$$\text{New Business Growth Rate} = \frac{[50\% \times \text{growth rate (t)}] + [30\% \times \text{growth rate (t-1)}] + [20\% \times \text{growth rate (t-2)}]}{}$$

where,

t = one year immediately preceding the current assessment year;

t-1 = two years immediately preceding the current assessment year; and

t-2 = three years immediately preceding the current assessment year.

Note:

- The new business premiums refer to both single and annual premiums for all types of businesses (ordinary life, annuity and investment-linked) as reported in the 'Statement of New Policies' as specified in the Guidelines for ICSS.
- The new business growth rate is based on a 3-year weighted average growth rate, i.e. weightages of 50% for one year immediately preceding the current assessment year, 30% for two years immediately preceding the current assessment year and 20% for three years immediately preceding the current assessment year.
- An insurance company which has less than four (4) years of data shall not be assigned a score for this indicator. The score of this indicator shall be determined on a proportionate basis as specified in paragraph 7.4 (Insufficient Quantitative Information).

Data Requirement	Source of Information	Remarks
Single and annual/regular premiums	Statement of New Policies, Form L6 as specified in the Guidelines for ICSS.	The annual premiums equivalent ("APE") is adopted where it aggregates total new regular premiums with 10% new single premiums in the calculation.

Score Range:

New Business Growth Rate	
Range of Results	Score (%)
New Business Growth Rate > 10.00%	15
5.00% < New Business Growth Rate ≤ 10.00%	10
0.00% < New Business Growth Rate ≤ 5.00%	5
New Business Growth Rate ≤ 0.00%	0

Appendix 8

OPERATIONAL AND SUSTAINABILITY MEASURE - LIFE INSURANCE BUSINESS

Business Concentration Ratio

Formula:

$$\text{Business Concentration Ratio} = \frac{\text{New business regular premiums (t)}}{\text{New business single premiums (t)}} \times 100\%$$

where,

t = one year immediately preceding the current assessment year.

Data Requirement	Source of Information	Remarks
New business regular premiums	“Annual Premiums” category in the Statement of New Policies, Form L6 as specified in the Guidelines for ICSS.	New business regular premiums refers to total annual premiums that include ordinary life, investment-linked and annuities.
New business single premiums	“Single Premiums” category in the Statement of New Policies, Form L6 as specified in the Guidelines for ICSS.	New business single premiums refers to total annual premiums that include ordinary life, investment-linked and annuities.

Score Range:

Business Concentration Ratio	
Range of Results	Score (%)
Business Concentration Ratio > 200.00%	25
150.00% < Business Concentration Ratio ≤ 200.00%	16
100.00% ≤ Business Concentration Ratio ≤ 150.00%	8
Business Concentration Ratio < 100.00%	0

Appendix 9

OPERATIONAL AND SUSTAINABILITY MEASURE - LIFE INSURANCE BUSINESS

Business Conservation Ratio

Formula:

$$\text{Business Conservation Ratio} = \frac{\text{Renewal premiums (t)}}{\text{Renewal premiums (t-1) + First year premiums (t-1)}} \times 100\%$$

where,

t = one year immediately preceding the current assessment year; and

t-1 = two years immediately preceding the current assessment year.

Data Requirement	Source of Information	Remarks
Renewal premiums	Premiums Income/Consideration of Annuities Granted, Form L1-1 (Schedule 1) and Premiums/Net Creation of Units for Investment-Linked Business, Form L1-2 (Schedule 1) as specified in the Guidelines for ICSS.	Renewal premiums refer to premiums receivable subsequent to the first policy year, where the premiums payment term is two or more years. In calculating the renewal premiums, it includes the total gross direct premiums for renewal year's premiums of all businesses and total investment-linked operating fund for renewal year premiums.
First year premiums	Premiums Income/Consideration of Annuities Granted, Form L1-1 (Schedule 1) and Premiums/Net Creation of Units for Investment-Linked Business, Form L1-2 (Schedule 1) as specified in the Guidelines for ICSS.	First year premiums refer to premiums receivable for the first policy year, where the premiums payment term is two or more years. In calculating the first year premiums, it includes the total gross direct premiums for first year's premiums income of all businesses and total investment-linked operating fund for first year premiums.

Score Range:

Business Conservation Ratio	
Range of Results	Score (%)
Business Conservation Ratio > 90.00%	25
85.00% < Business Conservation Ratio ≤ 90.00%	16
80.00% ≤ Business Conservation Ratio ≤ 85.00%	8
Business Conservation Ratio < 80.00%	0

TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

Appendix 10

OPERATIONAL AND SUSTAINABILITY MEASURE - LIFE INSURANCE BUSINESS

Asset Matching and Return

Asset Matching and Return (“AMR”) is based on a matrix approach, comprising two sub-indicators: (a) Asset-Liability Duration Matching (“ALDM”) and (b) Investment Yield (“IY”).

(a) Asset-Liability Duration Matching

Formula:

$$\text{ALDM} = \frac{\text{Asset Dollar Duration ("ADD")}}{\text{Liability Dollar Duration ("LDD")}} \times 100\%$$

where,

$$\text{ADD} = \frac{(A_2 - A_1)}{[2 \times (A_0) \times (Y/10000)]} \times A_0$$

$$\text{LDD} = \frac{(L_2 - L_1)}{[2 \times (L_0) \times (Y/10000)]} \times L_0$$

A₀ = the value of assets under the base scenario;

A₁ = the value of assets when its interest rate/yield rises by Y basis points;

A₂ = the value of assets when its interest rate/yield falls by Y basis points;

L₀ = the value of liabilities under the base scenario;

L₁ = the value of liabilities when its interest rate/yield rises by Y basis points;

L₂ = the value of liabilities when its interest rate/yield falls by Y basis points; and

Y/10000 = interest rate/yield changes (in 2 decimals).

Note: For the calculation of ALDM, Y=100

Data Requirement	Source of Information
Assets and liabilities valued at base interest rate/yield (A ₀ & L ₀)	RBC Framework – Reporting Form: Life Insurance Fund – (iii) Interest Rate Risks, Form C1-2 (aggregate base value ⁷ for all life insurance funds ⁸)
Assets and liabilities valued at base interest rate/yield + 100bps (A ₁ & L ₁)	Other supporting information

⁷ As defined in BNM/RH/PD 032-12 Risk-Based Capital Framework for Insurers, Appendix II section 4.

⁸ Aggregated base value of assets and liabilities from Participating Ordinary Life Fund, Non-Participating Ordinary Life Fund, Participating Annuity Fund, Non-Participating Annuity Fund as well as Investment-Linked Operating Fund forms only.

Assets and liabilities valued at base interest rate/yield - 100bps (A ₂ & L ₂)	Other supporting information
---	------------------------------

Note:

- The assets component is computed based on all interest rate related assets as defined in *BNM/RH/PD 032-12 Risk-Based Capital Framework for Insurers, Appendix II section 4*
- The liabilities component is computed based on guaranteed insurance liabilities as defined in *BNM/RH/PD 032-12 Risk-Based Capital Framework for Insurers, Appendix VII*
- The stress factor is ± 100 bps on the base scenario interest rate/yield.
- The assets and liabilities refer to assets and liabilities of the ordinary life fund, annuity fund and investment-linked operating fund.

(b) Investment Yield

Formula:

$$IY = \frac{2 \times [\text{Net investment income (I)} + \text{Net capital gains or losses (C)}]}{\text{Total investment assets (t)} + \text{Total investment assets (t-1)} - (I+C)} \times 100\%$$

where,

t = one year immediately preceding the current assessment year; and

t-1 = two years immediately preceding the current assessment year.

Data Requirement	Source of Information	Remarks
Net investment income	Life Business Revenue Account, Form L1-1 and Form L1-2, as specified in the Guidelines for ICSS.	Net investment income refers to the total net investment income of the ordinary life fund, annuity fund and investment-linked operating fund.
Net capital gains or losses	Life Business Revenue Account, Form L1-1 and Form L1-2, as specified in the Guidelines for ICSS.	Net capital gains or losses* include: <ol style="list-style-type: none"> Profit on disposal of securities and properties; Loss on disposal of securities and properties; Accretion of discounts on securities; Amortisation of premiums on securities; Unrealised gain on securities and other investments; Unrealised loss on securities and other investments; Write back of impairment loss of securities and other investments; Impairment loss of securities and other investments; and

	Other supporting information.	<p>(ix) Changes in gross Available-For-Sale (“AFS”)/Fair Value through Other Comprehensive Income (“FVOCI”) reserves**.</p> <p>* Net capital gains or losses refer to the total net capital gains or losses of the ordinary life fund, annuity fund and investment-linked operating fund.</p> <p>** Changes in gross AFS/FVOCI reserves is the difference between AFS/FVOCI reserves, gross of tax as at 31 December of two years immediately preceding the current assessment year and the AFS/FVOCI reserves, gross of tax, as at 31 December of one year immediately preceding the current assessment year.</p>
Total investment assets	Life Fund Balance Sheet, Form L3-2 and Form L3-3, as specified in the Guidelines for ICSS.	<p>Total investment assets refer to the total investment assets of the ordinary life fund, annuity fund and investment-linked operating fund.</p> <p>Total investment assets include:</p> <ul style="list-style-type: none"> (i) Investment properties; (ii) Loans; (iii) Investments; (iv) Foreign assets; and (v) Cash and deposits.

Asset Matching and Return Matrix

Range of Results			
IY Measure	ALDM Measure		
	100.00% ≤ ALDM < 200.00%	80.00% ≤ ALDM < 100.00% OR 200.00% ≤ ALDM < 300.00%	ALDM < 80.00% OR ALDM ≥ 300.00%
IY ≥ BIR	Score 1	Score 2	Score 4
IY < BIR	Score 2	Score 3	Score 4

Note:

- (i) The Bond Index Return (“BIR”) is based on the Malaysian Government Securities (“MGS”) 3-7 year index. The BIR comprises investment income and capital gains/losses over a period. It represents the change between the index value as at the last trading date of December for the two (2) years immediately preceding the current assessment year and the index value as at the last trading date of December for one (1) year immediately preceding the current assessment year, as published by Bond Pricing Agency Malaysia Sdn Bhd.

Score 3	7
Score 4	0

Appendix 11

OPERATIONAL AND SUSTAINABILITY MEASURE - LIFE INSURANCE BUSINESS

Expense Ratio

Formula:

$$\text{Expense Ratio} = \frac{\text{Management expenses} + \text{Agency remuneration}}{\text{Net premium income}} \times 100\%$$

Data Requirement	Source of Information	Remarks
Management expenses	Life Business Revenue Account, Form L1, as specified in the Guidelines for ICSS.	Management expense is defined as all expenses relating to insurance and investment-linked business, other than claims and agency remuneration, from all businesses, i.e. ordinary life, investment-linked, and annuity.
Agency remuneration	Life Business Revenue Account, Form L1, as specified in the Guidelines for ICSS.	<p>Agency remuneration is defined as total commission paid to agents, agency leaders or other intermediaries (such as banks) in respect of single premiums, premiums relating to the first policy year and renewal policy years of the insurance contracts, net of reinsurance commission and agency-related expenses*. For investment-linked business, agency remuneration refers to remuneration or reward for bringing in business.</p> <p>In calculating the agency remuneration, it should include all the agency remuneration for all businesses, i.e. ordinary life, investment-linked, and annuity.</p> <p>*Agency-related expenses include material incentives, fringe benefits, break-away benefits and office maintenance expenses paid/payable to agents or agency leaders.</p>
Net premium income	Life Business Revenue Account, Form L1, as specified in the Guidelines for ICSS.	Net premium income is defined as total net premium income from all businesses, i.e. ordinary life, investment-linked, and annuity.

TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

ILLUSTRATION 2: COMPUTATION OF GROSS PREMIUM GROWTH RATE

Insurance Company B

Gross premiums for 2019(RM' 000):	620,000
Gross premiums for 2018 (RM' 000):	560,000
Gross premiums for 2017 (RM' 000):	520,000
Gross premiums for 2016 (RM' 000):	480,000

$$\text{Gross Premium Growth Rate} = \frac{[\text{Gross premiums (t)} - \text{Gross premiums (t-1)}]}{\text{Gross premiums (t-1)}} \times 100\%$$

One year immediately preceding the current assessment year (t)

$$\begin{aligned} \text{Gross Premium Growth Rate} &= \frac{(\text{RM}620 \text{ million} - \text{RM}560 \text{ million})}{\text{RM}560 \text{ million}} \times 100\% \\ &= \frac{\text{RM}60 \text{ million}}{\text{RM}560 \text{ million}} \times 100\% \\ &= \underline{\underline{10.71\%}} \end{aligned}$$

Two years immediately preceding the current assessment year (t-1)

$$\begin{aligned} \text{Gross Premium Growth Rate} &= \frac{(\text{RM}560 \text{ million} - \text{RM}520 \text{ million})}{\text{RM}520 \text{ million}} \times 100\% \\ &= \frac{\text{RM}40 \text{ million}}{\text{RM}520 \text{ million}} \times 100\% \\ &= \underline{\underline{7.69\%}} \end{aligned}$$

Three years immediately preceding the current assessment year (t-2)

$$\begin{aligned} \text{Gross Premium Growth Rate} &= \frac{(\text{RM}520 \text{ million} - \text{RM}480 \text{ million})}{\text{RM}480 \text{ million}} \times 100\% \\ &= \frac{\text{RM}40 \text{ million}}{\text{RM}480 \text{ million}} \times 100\% \\ &= \underline{\underline{8.33\%}} \end{aligned}$$

3-Year Weighted Average

$$\begin{aligned} \text{Gross Premium Growth Rate} &= [50\% \times \text{growth rate (t)}] + [30\% \times \text{growth rate (t-1)}] + \\ &\quad [20\% \times \text{growth rate (t-2)}] \\ &= [50\% \times 10.71\%] + [30\% \times 7.69\%] + [20\% \times 8.33\%] \\ &= \underline{\underline{9.33\%}} \end{aligned}$$

As a result, Insurance Company B will get a score of **14%** under the gross premium growth rate indicator.

TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

ILLUSTRATION 3: COMPUTATION OF BUSINESS DIVERSIFICATION RATIO

Insurance Company C

As at 31 December of the Preceding Assessment Year	RM'000
Provision of risk margin for adverse deviation	120,000
Fund provision of risk margin for adverse deviation	100,000

$$\begin{aligned} \text{Business Diversification Ratio} &= \frac{\text{Provision of risk margin for adverse deviation} - \text{Fund provision of risk margin for adverse deviation}}{\text{Provision of risk margin for adverse deviation}} \times 100\% \\ &= \frac{\text{RM120 million} - \text{RM100 million}}{\text{RM120 million}} \times 100\% \\ &= \underline{\underline{16.67\%}} \end{aligned}$$

As a result, Insurance Company C will get a score of **8%** under the business diversification ratio indicator.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

ILLUSTRATION 4: COMPUTATION OF RECEIVABLE RATIO

Insurance Company D

As at 31 December of the Preceding Assessment Year	RM'000
Gross premiums	180,000
<u>Insurance receivable</u>	
Total outstanding premiums and agent's balances *	15,000
Total amount due from reinsurers/ceding companies **	15,000
Total insurance receivable	30,000

* Only includes outstanding balances more than 60 days.

** Only includes amount due more than 90 days.

$$\begin{aligned}
 \text{Receivable Ratio} &= \frac{\text{Insurance receivables}}{\text{Gross premiums}} \times 100\% \\
 &= \frac{\text{RM30 million}}{\text{RM180 million}} \times 100\% \\
 &= \underline{\underline{16.67\%}}
 \end{aligned}$$

As a result, Insurance Company D will get a score of **5%** under the receivable ratio indicator.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

ILLUSTRATION 5: COMPUTATION OF COMBINED RATIO

Insurance Company E

As at 31 December of the Preceding Assessment Year	RM'000
Earned premium income	95,000
Net claims incurred	50,000
Management expenses	25,000
Net commission	15,000

$$\begin{aligned}
 \text{Combined Ratio} &= \frac{(\text{Net claims incurred} + \text{Management expenses} + \text{Net commission})}{\text{Earned premium income}} \times 100\% \\
 &= \frac{(\text{RM50 million} + \text{RM25 million} + \text{RM15 million})}{\text{RM95 million}} \times 100\% \\
 &= \underline{\underline{94.74\%}}
 \end{aligned}$$

As a result, Insurance Company E will get a score of **16%** under the combined ratio indicator.

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

ILLUSTRATION 6: COMPUTATION OF MEAN-ADJUSTED RETURN VOLATILITY

Formula:

$$\frac{\text{Semi-standard deviation of operating profit/(loss) over three (3) years}^*}{\text{Mean operating profit/(loss) over three (3) years}}$$

* Semi-standard Deviation =

$$\sqrt{\frac{1}{(n-1)} \times \sum_{i=t}^{t-2} (r_i - \text{Mean})^2}, \text{ only when } r_i < \text{Mean}$$

where,

r_i = operating profit;

Mean = the average operating profit over three (3) years;

t = one year immediately preceding the current assessment year;

$t-1$ = two years immediately preceding the current assessment year;

$t-2$ = three years immediately preceding the current assessment year; and

n = number of observations. i.e. 3.

Illustration 6.1:

Insurance Company F

Operating Profit for 2017 (RM' 000) : 240,000 (r_{t-2})

Operating Profit for 2018 (RM' 000) : 150,000 (r_{t-1})

Operating Profit for 2019 (RM' 000) : 180,000 (r_t)

$$\begin{aligned} \text{Mean} &= \frac{\text{RM240 million} + \text{RM150 million} + \text{RM180 million}}{3} \\ &= \text{RM190 million} \end{aligned}$$

Given the operating profit for 2014 (r_{t-1}) and 2015 (r_t) were less than the mean of RM190 million, the semi-standard deviation will be computed as follows:

$$\begin{aligned} \text{Semi-standard deviation} &= \sqrt{\frac{(0)^2 + (150 - 190)^2 + (180 - 190)^2}{(3-1)}} \\ &= \sqrt{\frac{1,700}{2}} \\ &= 29.15 \end{aligned}$$

Ref No	TIPS/GL12-A4/2020(DLS)	Issued on	30 March 2020
TITLE	Guidelines on Differential Levy Systems Framework for Insurance Companies		

$$\begin{aligned} \text{Mean-Adjusted Return Volatility} &= \frac{\text{Semi-standard deviation of operating profit}}{\text{Mean operating profit}} \\ &= \frac{29.15}{190} \\ &= \underline{0.15} \end{aligned}$$

In this case, Insurance Company F scores **15%** for this indicator.

Illustration 6.2:

Insurance Company G

Operating Loss for 2017 (RM' 000) : (60,000) (r_{t-2})

Operating Profit for 2018 (RM' 000) : 100,000 (r_{t-1})

Operating Profit for 2019 (RM' 000) : 150,000 (r_t)

$$\begin{aligned} \text{Mean} &= \frac{\text{RM}(60 \text{ million}) + \text{RM}100 \text{ million} + \text{RM}150 \text{ million}}{3} \\ &= \text{RM}63.33 \text{ million} \end{aligned}$$

Given the operating loss for 2017 (r_{t-2}) was less than the mean of RM63.33 million, the semi-standard deviation will be computed as follows:

$$\begin{aligned} \text{Semi-standard deviation} &= \sqrt{\frac{(-60-63.33)^2+(0)^2+(0)^2}{(3-1)}} \\ &= \sqrt{\frac{15,210.29}{2}} \\ &= 87.21 \end{aligned}$$

$$\begin{aligned} \text{Mean-Adjusted Return Volatility} &= \frac{\text{Semi-standard deviation of operating profit}}{\text{Mean operating profit}} \\ &= \frac{87.21}{63.33} \\ &= \underline{1.38} \end{aligned}$$

In this case, Insurance Company G scores **0%** for this indicator.
